

# NATIONAL AI DAY

Artificial Intelligence is the intelligence possessed by the machines under which they can perform various functions with human help. With the help of A.I, machines will be able to learn, solve problems, plan things, think, etc. Artificial Intelligence, for example, is the simulation of human intelligence by machines. In the field of technology, Artificial

Intelligence is evolving rapidly day by day and it is believed that in the near future, artificial intelligence is going to change human life very drastically and will most probably end all the crises of the world by sorting out the major problems.

Our life in this modern age depends largely on computers. It is almost impossible to think about life without computers. We need computers in everything that we use in our daily lives. So it becomes very important to make computers intelligent so that our lives become easy. Artificial

Intelligence is the theory and development of computers, which imitates the human intelligence and senses, such as visual perception, speech recognition, decision-making, and translation between languages. Artificial Intelligence has brought a revolution in the world of technology.

# What is AI

Artificial intelligence is the science of making machines that can think like humans. It can do things that are considered "smart." AI technology can process large amounts of data in ways, unlike humans. The goal for AI is to be able to do things such as recognize patterns, make decisions, and judge like humans

# Importance of AI

**Artificial Intelligence (AI)** has evolved rapidly, becoming a transformative technology in many areas of modern life. At its core, AI involves the development of computer systems capable of performing tasks that traditionally require human intelligence, such as visual perception, speech recognition, decision-making, and language translation

# Drawbacks of AI

Ethical Concerns: AI raises ethical issues, including data privacy, algorithm bias, and potential misuse of AI technologies. **Lack of Creativity and Empathy:** AI lacks human qualities like creativity and empathy, limiting its ability to understand emotions or produce original ideas.

## Disadvantages of Artificial Intelligence
